Summary

Data Engineer with around 4 years of experience specializing in Big Data applications, ETL pipelines, and Petabyte-scale clusters. Proven track record of optimizing system efficiency by 30% and managing 20+ TB of daily data processing

Skills

Big Data & Technology : PySpark, Apache Spark, Airflow, Hadoop, Hudi, Kafka, kafka-connect, CDC & ETL Pipelines

Languages: Java, C++, SQL (PostgreSQL, SQL, MySQL), HTML, Bootstrap.

Databases : Postgres (sql database) and MongoDB (NoSQL), AWS (S3, ECR, MSK)

Other Tools : Git, On-premise cloud, OOPS, Nifi, Docker, Kubernetes, cursor, terraform, CI/CD, kargo, Datadog

Experience

Data Engineer II

JumpCloud

July 2025 to Current

New Production infra : Engineered a production-scale CDC pipeline using Kafka Connect for a new regional rollout. Conducted extensive resource fine-tuning (CPU/Memory) to maximize throughput and minimize ingestion latency across distributed environment.

Optimizations: Boosted system efficiency by 30% by introducing a resource-optimize cluster, adding cron job for Kafka-Connect connectors, and re-engineered the monitoring stack (**Datadog**) for better performance tracking.

Data Engineer II

Airtel International LLP – Gurugram

June 2024 to July 2025

- **Hadoop LineReader (Open Source Enhancement) :** Modified open-source Hadoop LineReader internally to support customized line separators, enhancing parsing of special characters.
- **XML Parser:** Developed a XML parser to solve the challenges of extracting data from complex nested tags, transforming the extracted data into a structured DataFrame. Integrated this parser into a high-performance data extraction pipeline using Apache Spark, enabling efficient processing for **ETL** operations.
- **MongoDB in Spark:** MongoDB incremental support for Spark framework.
- **Exactly Once for Spark Batch (Open Source Enhancement):** Implemented a solution to provide exactly once semantics for Spark Batch jobs with multiple sources and multiple sinks, overcoming the limitation of the standard exactly once guarantee and enabling reliable data processing at large scale.

Software Developer (Big Data)

Airtel International LLP – Gurugram

June 2022 to June 2024

- **Subscriber's location Decode:** Achieved a **45%** increase in subscriber location tagging accuracy with network by enhancing decoding logic at the byte level and creating specialized transformers, resulting in improved performance for leading telecom vendors, such as ZTE and Huawei.
- **Big Data ETL Solutions:** Implemented scalable **ETL pipelines** processing **20+ TB** of data daily across 14 countries, using UDFs, UDAFs, and transformations to extract insights. Streamlined storage with ORC and Hudi, including upsert support, on a Petabyte-scale cluster in an **Agile** environment.

Software Developer (Intern) - Airtel International LLP

January 2022 to June 2022

- **Apache NiFi:** Have modified workflow for seamless data ingestion between source and destination

Projects & Education

• **Hand recognition calculator:** calculation via recognizing digits shown by hands, **Python, OpenCV, and OOPS** concepts

• **Trending YouTube data analysis:** A Flask application that gives users trending video data based on date and category, **Flask, MySQL, Python, GitHub, HTML, CSS, JavaScript, Bootstrap**

B.Tech : Maulana Azad National Institute of Technology (NIT-Bhopal) – Bhopal Computer Science, June 2022

• CIO - Spot Award Gold badge in SQL and DSA on hacker rank 1000+ DSA Problems solved
